SMART PORT
POWER-INJECTABLE PORTS
Engineered for Life

Smart Port® High-Performance Titanium Power-Injectable Ports are indicated up to 5mL/sec and 300 psi and are MRI-conditional—3 Tesla.

**Standard CT**
- Designed with a Vortex® chamber for improved fluid dynamics
- Blue boot strain-relief mechanism allows for placement flexibility and protects against catheter kinking
- Silicone-filled suture holes available for ease of explants
- Atraumatic radiopaque tip

**Fluoromax® radiopaque catheter**
- silicone and polyurethane options

**Low-Profile CT**
- 6.6F catheter reduces the risk of thrombosis

**Mini CT**
- Smallest profile titanium CT-rated port indicated for chest or peripheral placement

Each Smart Port model features a light-weight design and a CT-engraved port body for better identification.
The Vortex Technology Difference

Reduce chamber occlusions.
Increase nursing efficiency.
Reduce overall interventions.

Superior Fluid Dynamics
compared to conventional ports.

Round Chamber
allows fluid to reach all surfaces in the chamber, helping eliminate dead spaces, resist sludge build-up, and reduce occlusions.

Tangential Outlet
helps create a flushing action within the port to hyper cleanse the entire chamber leading to a reduced rate of occlusions.

A comparison of conventional vs. Vortex chambered ports shows a clear advantage.¹

Vortex demonstrated

73% fewer port occlusions¹

69% fewer secondary interventions¹

Use of Vortex port technology results in $1,224 average savings per patient over conventional ports.²

Identifying a Smart Port Power-Injectable Port

Smart Port power-injectable ports can be identified by the Smart Angle™ technology on the CT and CT Low-Profile models. The CT engraving on all models can be identified through chest x-ray or CT Scout Scan. Each Smart Port patient receives an education packet—including an information booklet, ID card, key ring card and ID bracelet.

² Third party verification by Pinnacle Healthcare Management.

Safe Sheath® Ultra Lite
Valved, peel-away sheath

- Provides for effortless access for port insertion
- Decreased risk of blood loss and air embolism
- Ergonomically designed, easy-splitting break away hub and positive locking connector
- Available in select Smart Port kits

**IMPORTANT RISK INFORMATION**

The following is a brief summary of important risk information for the Smart Port power-injectable port line. For detailed information on the categories referenced, please consult the instructions for use packaged with each device. Observe all instructions prior to use. Failure to do so may result in patient complications.

**INDICATION FOR USE:** The Smart Port CT power injectable port line is indicated for any patient requiring repeated access of the vascular system for delivery of medications, nutritional supplementation, fluids, blood, blood products, sampling of blood and power injection of contrast media for imaging. Use of non Y site LifeGuard Safety Infusion Set (size = 20Ga or 19Ga) is indicated for power injection of contrast media. For power injection of contrast media, maximum recommended infusion rate is 5ml/sec.

**INDICATIONS FOR USE:** The Safe Sheath Ultralite is indicated for the introduction of various types of pacing leads and catheters. This device is intended for one time use only. Read instructions prior to use.

**CONTRAINDICATIONS:** Smart Port CT should not be implanted in the presence of known or suspected infections, bacteremia, sepsis, and peritonitis, or in patients who have exhibited prior intolerance to the materials of construction, or patients whose body size or tissue is insufficient to accommodate the size of the port or catheter.

**WARNINGS AND PRECAUTIONS:** Please see package insert for complete list of warnings and precautions.

**POTENTIAL COMPLICATIONS:** Consult package insert for a complete list of potential complications.

**CAUTION:** Federal (USA) law restricts these devices to sale by or on the order of a physician.
