Proven to Reduce Thrombus Accumulation, In Vitro[†]

The BioFlo[®] Midline Catheter is the first, and only, midline catheter with Endexo[®] Technology, providing a catheter material more resistant to in-vitro thrombus accumulation, compared to commonly used catheters (based on platelet count).[‡]

The BioFlo Midline Catheter provides short-term access (< 30 days) to the peripheral venous system for selected intravenous therapies and blood sampling. The BioFlo Midline Catheter is a 20 cm trimmable catheter featuring Endexo Technology which is present throughout the catheter shaft including the intraluminal, extraluminal and cut surface of the catheter.

- X-ray confirmation is not required after placement
- Visibly marked as a midline catheter to aid in identification

[†]The reduction in thrombus accumulation (based on platelet count) is supported by acute in-vitro testing. Pre-clinical in-vitro evaluations do not necessarily predict clinical performance with respect to thrombus formation.

[‡]Based on benchtop testing performed up to two hours using bovine blood which may not be indicative of clinical results.

Maximal Protection for Improved Patient Care

BioFlo Midline Catheters are available in a variety of options for safe and reliable bedside placement.
