2022 REIMBURSEMENT CODING GUIDE

The RadiaDyne Alatus Vaginal Balloon Packing System is designed as an immobilizer to assist in positioning and displacing the vaginal wall in a more predictable and reproducible location during computed tomography (CT) exams and radiation treatment (RT) therapy. The use of the device must be ordered by the physician and documented in the patient record. Providers are responsible for selecting the most appropriate code for the device based upon medical necessity.

### Indications For Use

The RadiaDyne Alatus Vaginal Balloon Packing System is a single use, non-sterile, disposable, flexible, inflatable, non-powered positioning device, intended to be used on a daily treatment basis for the temporary positioning of the vaginal wall and adjacent structural anatomies. The purpose of the device is to displace and stabilize the vaginal wall during computed tomography (CT) exam, x-ray, or radiation treatment (RT) therapy. The placement of the balloon requires a physician or physician directed healthcare professional, and it is performed as a separate procedure outside of the standard (CT) exam and (RT) treatment. This device is not intended to be inserted into the uterine cavity.

### Contraindications

Vaginitis · Excessive Vaginal Bleeding · Any Standard Exclusionary Criteria Recognized for Vaginal Devices

Refer to Directions for Use and/or User Manual provided with the product for complete Instructions, Warnings, Precautions, Possible Adverse Effects and Contraindications prior to use of the product.

### CAUTION

Federal Law (USA) restricts this device to sale by or on the order of a physician.
